

# STEM AMBASSADOR SPOTLIGHT

**Adeline Nordmoe**  
Biomedical Engineering

**How did you select your college major? What was the biggest influence?**

I chose biomedical engineering because in high school I had an affinity for both math and science. Science has always interested me, and I knew that biomedical engineering was a bit more chemistry and biology focused than the other engineering disciplines.

---

**What advice would you share with K-12 students who are considering your major?**

I would say do not let calculus or other difficult sounding courses scare you because each class will build on the knowledge you already have learned.

---

**What high school elective course do you wish you had taken to better prepare you for college?**

I never got the opportunity to take a STEM elective class in high school, and I wish that was an option for me so I could have had more hands on experience.

---

**When you aren't in class or studying, what can you be found doing in your spare time?**

I play volleyball with my friends on an intramural team, and I like to bake as well.

---

**What motivates you to get out of bed and go to class every day?**

Going to class everyday gives me the opportunity to learn new things. I also do not let myself miss any classes because I do not want to miss out on important information.

---

**How do you or your major make a positive impact on society/our community?**

I want to help people in my career, so I chose biomedical engineering because I want to improve people's quality of life with medical technology.

---

**What do you look forward to the most while being a STEM Ambassador?**

I look forward to introducing students to the many opportunities and possibilities that the STEM field has to offer especially because that is something I never had in school.
