

STEM AMBASSADOR SPOTLIGHT

James TerBurgh
Civil Engineering

How did you select your college major? What was the biggest influence?

I have always been good at math, so engineering was the best choice for me. The reason I specifically chose civil engineering was that I thought dams were cool.

What advice would you share with K-12 students who are considering your major?

Make sure that you want to do engineering. While the classes are enjoyable, the workload is intense.

What high school elective course do you wish you had taken to better prepare you for college?

No elective that my high school provided would have prepared me better than what I already took.

When you aren't in class or studying, what can you be found doing in your spare time?

Typically I am found doing one of two things in my spare time: watching YouTube and playing video games

What motivates you to get out of bed and go to class every day?

The want to continuously improving myself is the motivation.

How do you or your major make a positive impact on society/our community?

In the future, I will be able to help provide more safety in the community with my major.

What do you look forward to the most while being a STEM Ambassador?

The thing I look forward to the most is seeing the kids get excited to learn about STEM like how I was when I was younger.
